01

Why this?

It's the way of why we want develop this application

03

Scalability

What is scalable if add features to this application

02

Features

Features of our application

04

How we do it?

Explain about how we do this project and what tools use

A lot of virtual assistant made in many area
that you think and growing in every day.
The more interesting thing that they can be
personalized and in this project we want to
create another one that personalized for
linux users.

Why
this?

Features

Text to speech and reverse

Search in google and etc

Open and close your software

System report

Learn and talk with you

Time based-reminder

Send and receive emails

Play music

You can easily add some features you want to use like turn up or down volume, take screen shot and etc.

scalability

How we do it?

Use python language for
development
Python

Documentation
For documentation we have
a full featured site that
explain about our product

Use aiml to make artificial
intelligent brain
Aiml

MySQL
For save data

THANKS!
